#### Industrial technology

- Solutions for the control cabinet
  - DIN rail terminal blocks
    - Screw, spring clamp or IDC connection technology
    - Wire cross sections up to 240 mm<sup>2</sup>
    - Numerous special functions
    - Software solutions interfacing to CAE systems
  - Safety
    - Safety sensors
    - Safety relays
    - Modular safety systems with fieldbus link
  - PLC and fieldbus components
    - Standard applications in IP20
    - Increased environmental conditions with railroad and ship approvals
  - Interface
    - Coupling relays, semiconductor switches
    - Measuring and monitoring relays
    - Timer and switching relays
    - Analog modules
    - Passive interfaces
    - Power supply units
    - Overvoltage protection

#### Solutions for field applications

- Remote automation technology
  - Power distribution
  - Fieldbus interfaces and motor starters
- Connectors for industrial applications
  - Square and round connectors
  - Aluminum or plastic housings
  - Degree of protection up to IP68
  - Current-carrying capacity up to 100 A
  - Connectors for hazardous areas
  - Modular, application specific technology

#### PC board terminals and connectors

- Screw or spring clamp connection technology
- Spacings: 3.5 mm to 10.16 mm
- Reflow or wave soldering process

#### Building and installation technology

- Building installation systems
  - Main power supply connectors IP20/IP65 ... IP68
  - Bus connectors
  - Combined connectors
  - Low-voltage connectors
  - Power distribution system with flat cables
  - Distribution systems
  - Bus systems in KNX, LON and radio technology
  - DIN rail terminal blocks for electrical installations
  - Overvoltage protection

**fasis**

DIN rail terminal blocks with tension spring connection, type **WKFN fasis SIS**

#### Technical information

- The information regarding cross sectional area and connection types pertains to unprepared wires without ferrules! Ferrules are not necessary for secure connection! Whenever ferrules are used, make sure that the tools specified by the manufacturer are used exclusively.
- The voltage ratings apply to the terminals in their intended application. When different products are mounted adjacent to each other, the proper isolation distances must be adhered to.
- If the ground blocks of the **fasis** product family are not used in block assemblies, but are mounted to the rail as single terminal blocks, end clamps have to be used.
- A detailed description of technical data, the standards requirements, and the application conditions are available under **facts & DATA**.

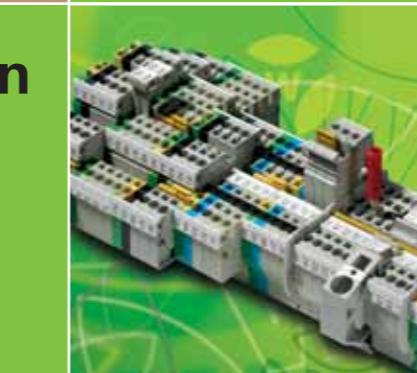

#### ATEX regulation

- For the use of DIN rail terminal blocks in Ex areas, the regulations of EN 60079-0 apply; whereas for increased safety Ex e the regulations of EN 60079-7 must be followed. For an approximation of the laws of the EU member states directive 94/9/EG was created, which is generally known as ATEX 100a and which is the basis for harmonization in this field. ATEX stands for "atmosphere explosive" while 100a refers to the corresponding article of the EC contract.
- Directive ATEX 100a applies for protection against dust and gas explosions in all industrial Ex areas and in mining. The testing and certifying institutes named in directive ATEX 100a must follow accreditation procedures which are the same throughout Europe.
- In accordance with EN 60079-0/60079-7 and ATEX 100a, these certifying institutes write out EC certificates for prototype tests. These prototype test certificates for components together with the corresponding quality system certification of the supplier are required to obtain the so-called ATEX approval.
- In combination with the -mark, the markings of the Wieland terminal blocks have the following meanings:

	Identification
II	Device group
2	Category
G D	Areas
KEMA	Name of testing institute
ATEX...	Certificate, year of testing, number

## DIN rail terminal blocks with tension spring connection **fasis**

### Our competence

**"We at Wieland"** don't do things by halves! Therefore we deliver our products in the highest quality possible and with user-friendly functions. Our 90 years of experience in electrical connections, our more than 20 years of experience in the field of spring clamp technology as well as the quality certifications according to ISO 9001:2000 and ISO 14001 guarantee this.

With products from **Wieland** you've got it all! Whether in ships, on cranes, in trains, or simply in control cabinets or systems, various areas of application stand for a unique know-how.

### You as our customer determine our future

DIN rail terminal blocks can be found wherever power is generated, supplied, routed and distributed. Since their invention in the thirties of the last century, their basic design has not changed much. However, the entire surroundings in which terminal blocks are used have undergone a radical change – with the corresponding effects on design and performance capabilities of the connection systems.

We want satisfied customers who enter into long-term relations with us.

### Squaring the circle for your benefit

DIN rail terminal blocks have to be marked visibly and be clearly assignable; it has to be possible to connect and jumper them flexibly and universally; finally they must enable testing under complete wiring and without having to disconnect the wires.

We have achieved this goal and have implemented these benefits for our customers with our **fasis** WKFN product series.

### Your application is our challenge

Flexibility in connection technology, economic efficiency in stocking and reliability in the application – these are the benefits which **fasis** offers to our users.

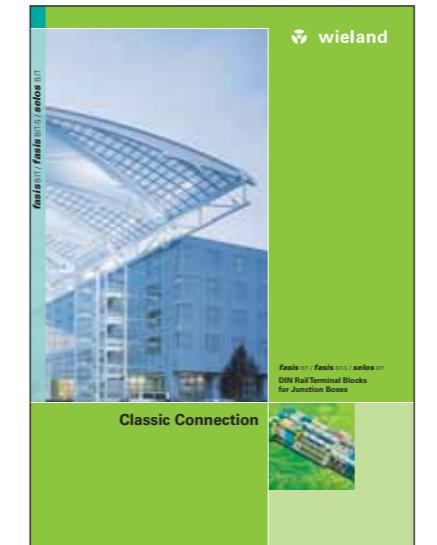

If you require explosion or fire protection, vibration or shock resistance or international approvals for worldwide use then **fasis** provides the terminal blocks required for your application.

### Individual service for your success

Connection technology is not our priority, as we master it anyway and our customers know it. We put our focus on the added value of our systems.

A user-friendly configuration software supports the wiring tasks while a marking software supports the marking activities. And for those who want to simplify their work in the control cabinet, we pre-assemble completely fitted terminal block assemblies – even with cables connected, if required. Individual components may be delivered within 24 hours under Wieland service **Quick 24**.

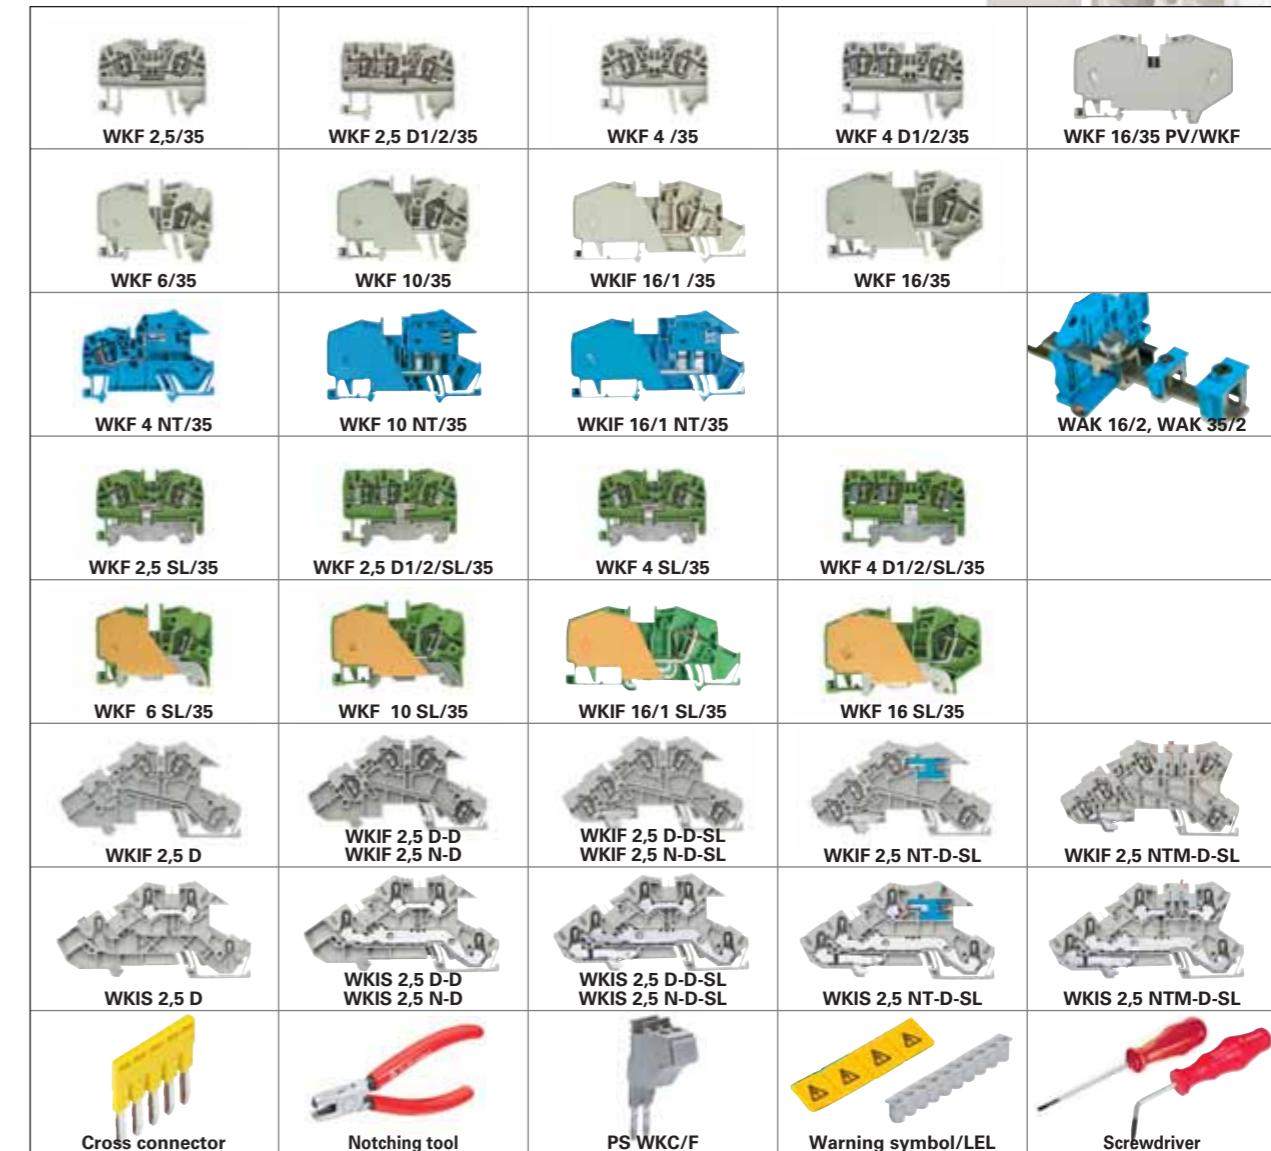

# fasis

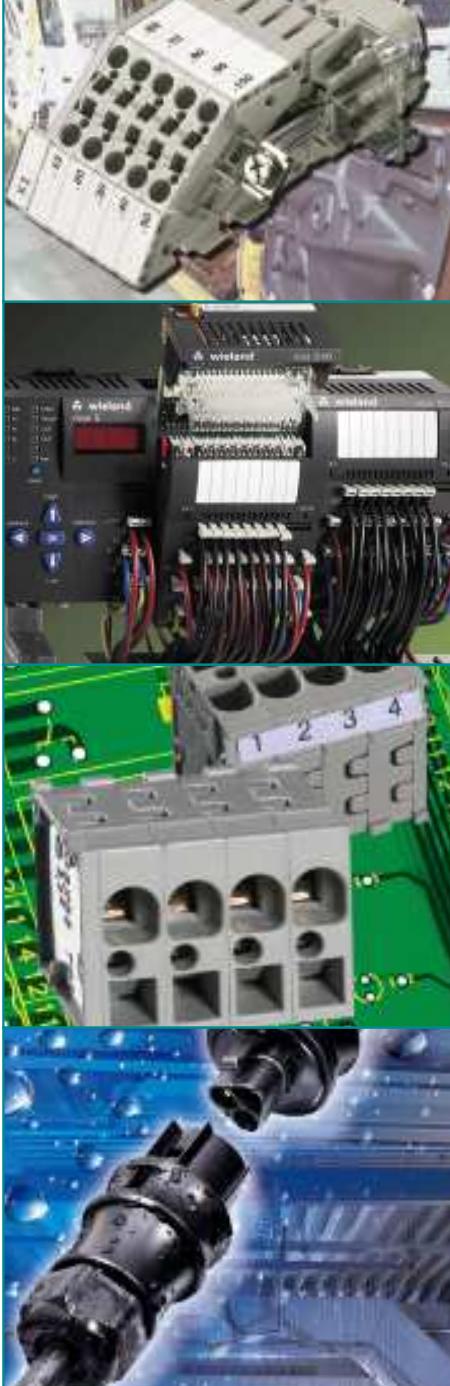

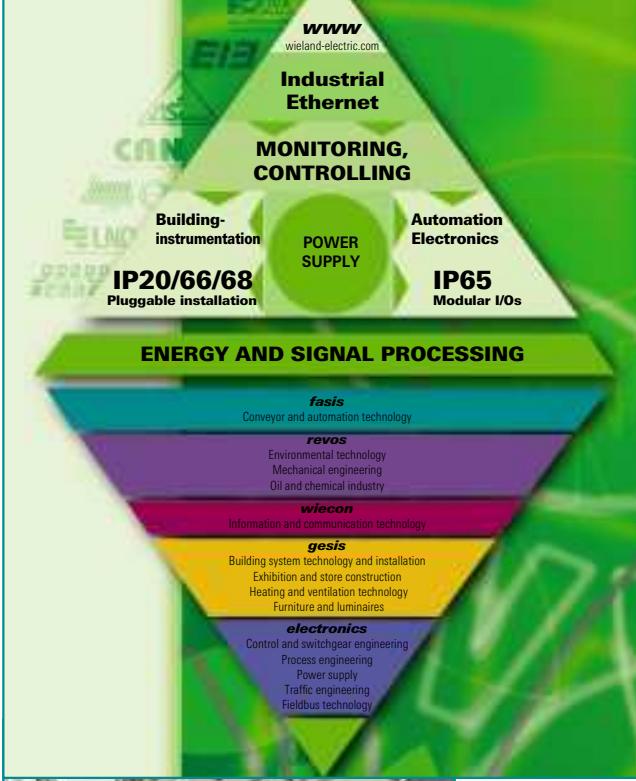

Catalog section

DIN Rail Terminal Blocks  
for Junction Boxes

Part no. 0117.0

Since its invention, the tension spring connection technology has been established in the market as an industrial standard along with screw and crimp connection technology. Technical advantages such as easy handling and vibration-proof contacting as well as economic advantages such as time savings and cost reduction in wiring are responsible for this success.

Competence in spring connection technology means safety and reliability for the future.

You can find such a wide product range in tension spring connection technology only at **Wieland Electric** DIN rail terminal blocks, PC board connectors, electronic components, industrial multipole connectors or the pluggable electrical installation system.

### ■ **revos** – industrial multipole connectors

Our industrial multipole connectors provide reliable protection against dirt, dust and water, vapors, gases and electromagnetic influences.

Multipole adapters and contact inserts with tension spring technology are available in all standard sizes and are ideal for rough environments.

The dynamic terminal connection inside the connector ensures a durable and safe contact.

### ■ **Electronics** – electronic components

The quality of our electronic products is the basis for the high degree of reliability.

It is an important advantage of digital bus technology that signal processing is possible in field devices, and that intelligence can therefore be distributed in the field.

For this reason, **ricos** modules with channels that can be used optionally as input or as output can be as interesting as the clear wiring.

### ■ **wiecon** – PC board connectors

**wiecon** is a fixed component of innumerable innovative applications.

Clear identification, simple wire connection and an intelligent test function of the reliable tension spring connection stand for easy handling.

The service-friendly usability of **wiecon** is guaranteed!

### ■ **gesis**® – pluggable electrical installation

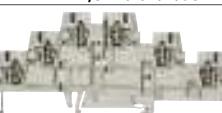

**gesis** – one name, one system!

The unique variety of components offers solutions for any kind of electrical installation. Consumer devices such as luminaires, sunblind drives, outlets or requirements for IP66/IP68 protection degree such as in automatic car wash systems, ships, airports and soccer stadiums can easily be incorporated in the installation system.

# DIN rail terminal blocks with tension spring connection

## fasis SIS

With its **fasis** WKFN series Wieland Electric offers you a complete range of DIN rail terminal blocks with tension spring technology.

The portfolio comprises feed-through and ground blocks with 2, 3 or 4 termination points, two-tier and three-tier blocks, single-tier and two-tier knife-edge disconnect blocks as well as fuse blocks. There are also function blocks with application-specific diode circuits available.

**fasis** WKFN has been designed for use in machine and system engineering as well as for hazardous areas.

### Technical information as per EN 60947-7:

Rated cross section:	1.5–35 mm <sup>2</sup>
Rated current:	17.5 A–125 A
Rated voltage:	800/500 V
Wire range:	0.08–35 mm <sup>2</sup>

## mark

### Clearly mark all clamping points

#### Benefits:

- Marking tags easily readable even with the wires connected.
- Clear assignment of wire to termination point for easy wiring
- Simplified troubleshooting for maintenance operations
- Individual marking with the **wiemarc** marking system

## clamp

### Flexible and universal connection

#### Benefits:

- Clamping body as per gauge plug EN 60947-7
- Connection of solid, fine-stranded and stranded wires up to a conductor size larger than the rated cross section for example WKFN 2,5: 0.13 to 4 mm<sup>2</sup>
- Connection of fine-stranded wires with ferrules and insulated sleeve up to the rated cross section for example WKFN 2,5: 0.5 to 2.5 mm<sup>2</sup>

## jump

### Jumpering the terminal blocks on two channels

#### Benefits:

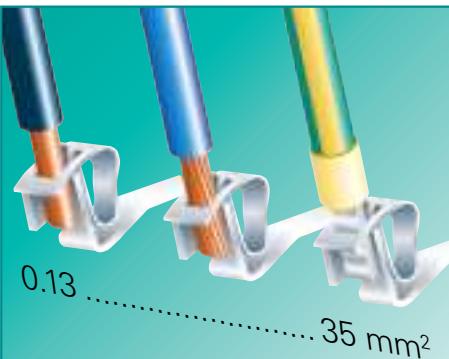

- Flexible potential distribution through staggered and chained arrangement of the cross connectors.
- Cost reduction in stockkeeping due to standardized variations (preferred number of poles)
- Potential distribution with supply blocks up to 76 A and standard connectors on feed-through terminal blocks.

## test

### Measuring voltage through integrated testing facility

#### Benefits:

- Testing when fully wired (including cross connector)
- Testing directly at the current-carrying bar
- Function test with modular test adapter through test point in the jumpering channel

## Tension spring connection technology

### Durable electrical connection

#### Benefits:

- The tension spring system provides a dynamic clamping connection. Load-controlled and thermal cold flow properties of the connected wires are balanced.
- Maintenance-free and gas-tight electrical connection as specified by the approvals.
- Isolation of electrical and mechanical functions

## Operating tool

## Wire entry guides

### Operated with a screwdriver

#### Benefits:

- Operation of the termination point does **not require any special tools**.
- For an optimal operation of our DIN rail terminal blocks with tension spring connection we recommend cylindrical screwdrivers with wedge-shaped blades according to DIN 5264 B in the size of the terminal blocks' rated cross sections.
- Also see the accessories for DIN rail terminal blocks on page 73!

### Safe connecting of "small cross sections"

#### Benefits:

- Ensures the connection of solid and fine-stranded wires smaller than 1 mm<sup>2</sup>.
- Wire entry guides prevent the wires from being inserted too deeply (smaller than 1 mm<sup>2</sup>) and enable professional contacting.
- Also see the accessories for DIN rail terminal blocks on page 73!

## Cover with warning symbol

### Marking live potentials

#### Benefits:

- Cover with warning symbol snapped onto the blocks indicates (high) voltage even when the main switch is disconnected (VDE 0113).
- The cover can only be removed with a tool which ensures safety.
- Also see the accessories for DIN rail terminal blocks on page 73!

## Materials

### Selection of high-quality materials

#### Benefits

- Special alloys enable low feed-through resistance and provide a gas-tight contact area:  
Clamping spring: stainless CrNi steel  
Current-carrying bar: tin-plated copper
- Polyamide has excellent electrical, chemical and mechanical characteristics  
Temperature resistance: up to 120 °C  
Creepage resistance: CTI 600  
Flammability class: self-extinguishing, UL 94-V0

# DIN rail terminal blocks with tension spring connection

## fasis SIS

### Power and potential distribution

With our **fasis** WKFN DIN rail terminal block system we focus on the application's system and flexibility. This mainly pays off in power and potential distribution.

**fasis** WKFN is consistently equipped with a two-channel jumpering system. Using standard cross connectors the potential can be distributed from the supply block to other DIN rail terminal blocks of type WKFN 2,5 and WKFN 4. Reducing jumpers for terminal blocks larger than 10 mm<sup>2</sup> are available as accessories for the distribution of high currents. Later extensions of the distribution system are not a problem and can be implemented quickly and flexibly!

What has proven for the termination point of the DIN rail terminal block is continued for the cross connectors, meaning we isolate the electrical and mechanical functions so that the electrical connections durably function as required and contribute to your system's operational safety.

### Jumpering the terminal blocks on two channels

#### Benefits:

- Power performance through parallel supply of the electrical power
- Flexible potential distribution through staggered and chained arrangement of the cross connectors
- Cost reduction in stockkeeping due to standardized variations (preferred number of poles)

### Easy potential interconnection

#### Benefits:

- Individual interconnection of potentials on the terminal block assembly
- Simply notch through pre-defined cutting edge
- Colored marking of the power circuit with pre-defined marking options

### Potenziale einfach verteilen

#### Benefits:

- Compact and closed design of supply block WKF 16/35 PV/ WKFN for wires up to 16 mm<sup>2</sup>
- Parallel power distribution on one side or both sides to WKFN standard DIN rail terminal blocks
- Power distribution to WKFN 4 or WKFN 2,5 with standard cross connectors IVB WKF 4 or 2,5

### Supply power up to 125 A

#### Benefits:

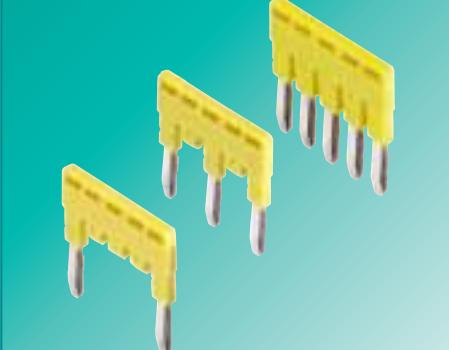

- Standard DIN rail terminal blocks WKFN 16 and 35 as supply block up to 50 mm<sup>2</sup>
- Power distribution through reducing jumpers from WKF 35 to WKFN 16
- WKF 35 to WKFN 10
- WKFN 16 to WKFN 10

## Function

## Application

## Pre-assembly

## Flexibility

### Durably and safe "jumpering"

- The DIN rail terminal blocks with tension spring connection of the fasis product series can be "jumped" using insulated cross connectors without screws.
- IP 20 protection against accidental contact is guaranteed even for inserted cross connectors.
- Isolation of the electrical and mechanical functions enables an optimal selection of materials without any compromise.
- The current-carrying bar makes it possible to apply the DIN rail terminal block's rated current to the cross connector.
- The contact spring balances the thermal cold flow properties of the current-carrying bar and thus ensures a durable electrical connection.
- Special alloys ensure a low contact resistance and a gas-tight contact area
  - Current-carrying bar: tin-plated copper
  - Contact spring: stainless CrNi steel

### Jumping with a system

- For the **smart jump** potential distribution insulated cross connectors in 2 to 20 pole designs are available.
- „Jumping“ cross connectors are available to interconnect non-adjacent potentials to **link jump**.
- The **power jump** power distribution up to 125A is implemented using reducing cross connectors – see page 35.

### “Jumping” and distributing potentials

- The jumping potential interconnection is created with notched cross connectors.
- The notched cross connectors
  - can be prepared by the user as required for the application by using the Wieland notching tool, or
  - can be purchased already pre-assembled from Wieland.
- Staggered jumpering with notched cross connectors is only possible with the **fasis** WKFN series.

### Individually notched cross connectors

- The notched cross connectors are prepared individually using the AKW/A notching tool.
- In order to easily cut out individual poles the cross connectors provide a pre-defined cutting edge.
- Notched cross connectors will reduce the rated voltage to 400V.
- All cross connectors with several poles provide a pre-defined marking space which enables colored marking of the current and signal flow.

# Configuration software for DIN rail terminal blocks, wieplan

**fasis** SIS

## Managing projects

**wieplan** was developed to provide you with a powerful software tool for the configuration of terminal block assemblies using Wieland DIN rail terminal blocks.

**wieplan** is available in 4 languages. It is user-friendly and its intuitive user interface guides you step by step through the entire configuration process. After completion you can optionally order your configured terminal block assembly from Wieland for complete pre-assembly.

Thus **wieplan** helps you to save time and money.

## Configuring terminal block assemblies without errors

### Benefits:

- To begin each configuration you automatically start from the basic project management menu.
- You create new projects and are reliably guided through the easy and practice-oriented program logics.
- You always have the choice of either opening an already existing project or of creating a new one.

## Entering order data

### Benefits:

- You work with high-quality graphs viewing the terminal blocks from the top; the accessories added are visible at any time.
- You continually use the plausibility check that reminds you of the accessories required such as end plates.
- You are provided with a product catalog with search function; you can add your own order numbers, if required; and you can create libraries for self-defined products.

## Terminal block assembly output

### Benefits:

- You enter your data such as invoice and delivery address in the order data screen only once and can use them for any follow-up orders.
- You may order by e-mail; in this case the terminal block assembly data are zipped automatically.

### Benefits:

- You print out the order, the parts list and the drawing data, and, if required, your own order numbers.
- You create a DXF file and export the current terminal block assembly to a CAD program.
- You export the marking in CSV format including all marking data for further processing in **wiemarc**, for example.
- You can use a bidirectional interface available for your CAE system EPLAN.

# Marking system for DIN rail terminal blocks, **wiemarc/wieplot**

## **selos-fasis-taris**

## **wieplot**

## **wiemarc**

## **wieplot engraving system**

Individual marking of DIN rail terminal blocks means **wiemarc** and **wieplot** at Wieland Electric. The **wieplot** software was developed to provide you with maximum flexibility in marking your terminal block assemblies. Together with **wieplot** you have a powerful marking system that enables you to work professionally from the individual marking tag to series marking of your terminal block assemblies. You feel confident with the system due to its easy handling and visual representation of your marking, even when you use it for the first time.

But **wieplot** offers even more!

In addition to the marking tags for DIN rail terminal blocks you can also print self-adhesive tags and labels or cable markings. A slight modification can even make your plotter a powerful engraving system.

### **Marking with a system**

- Individual marking of all terminal blocks for clear wire/termination point assignment
- One single marking system for all designs
- Marking of individual tags; marking strips in the relevant terminal block spacing; or group markings
- Individual planning of terminal block assemblies and markings with **wieplan**

### **Ready for universal use**

- Marks all common marking systems available for DIN rail terminal blocks
- Different marking tags can be marked individually in one single work step
- Marking of labels, self-adhesive tags and cables is possible

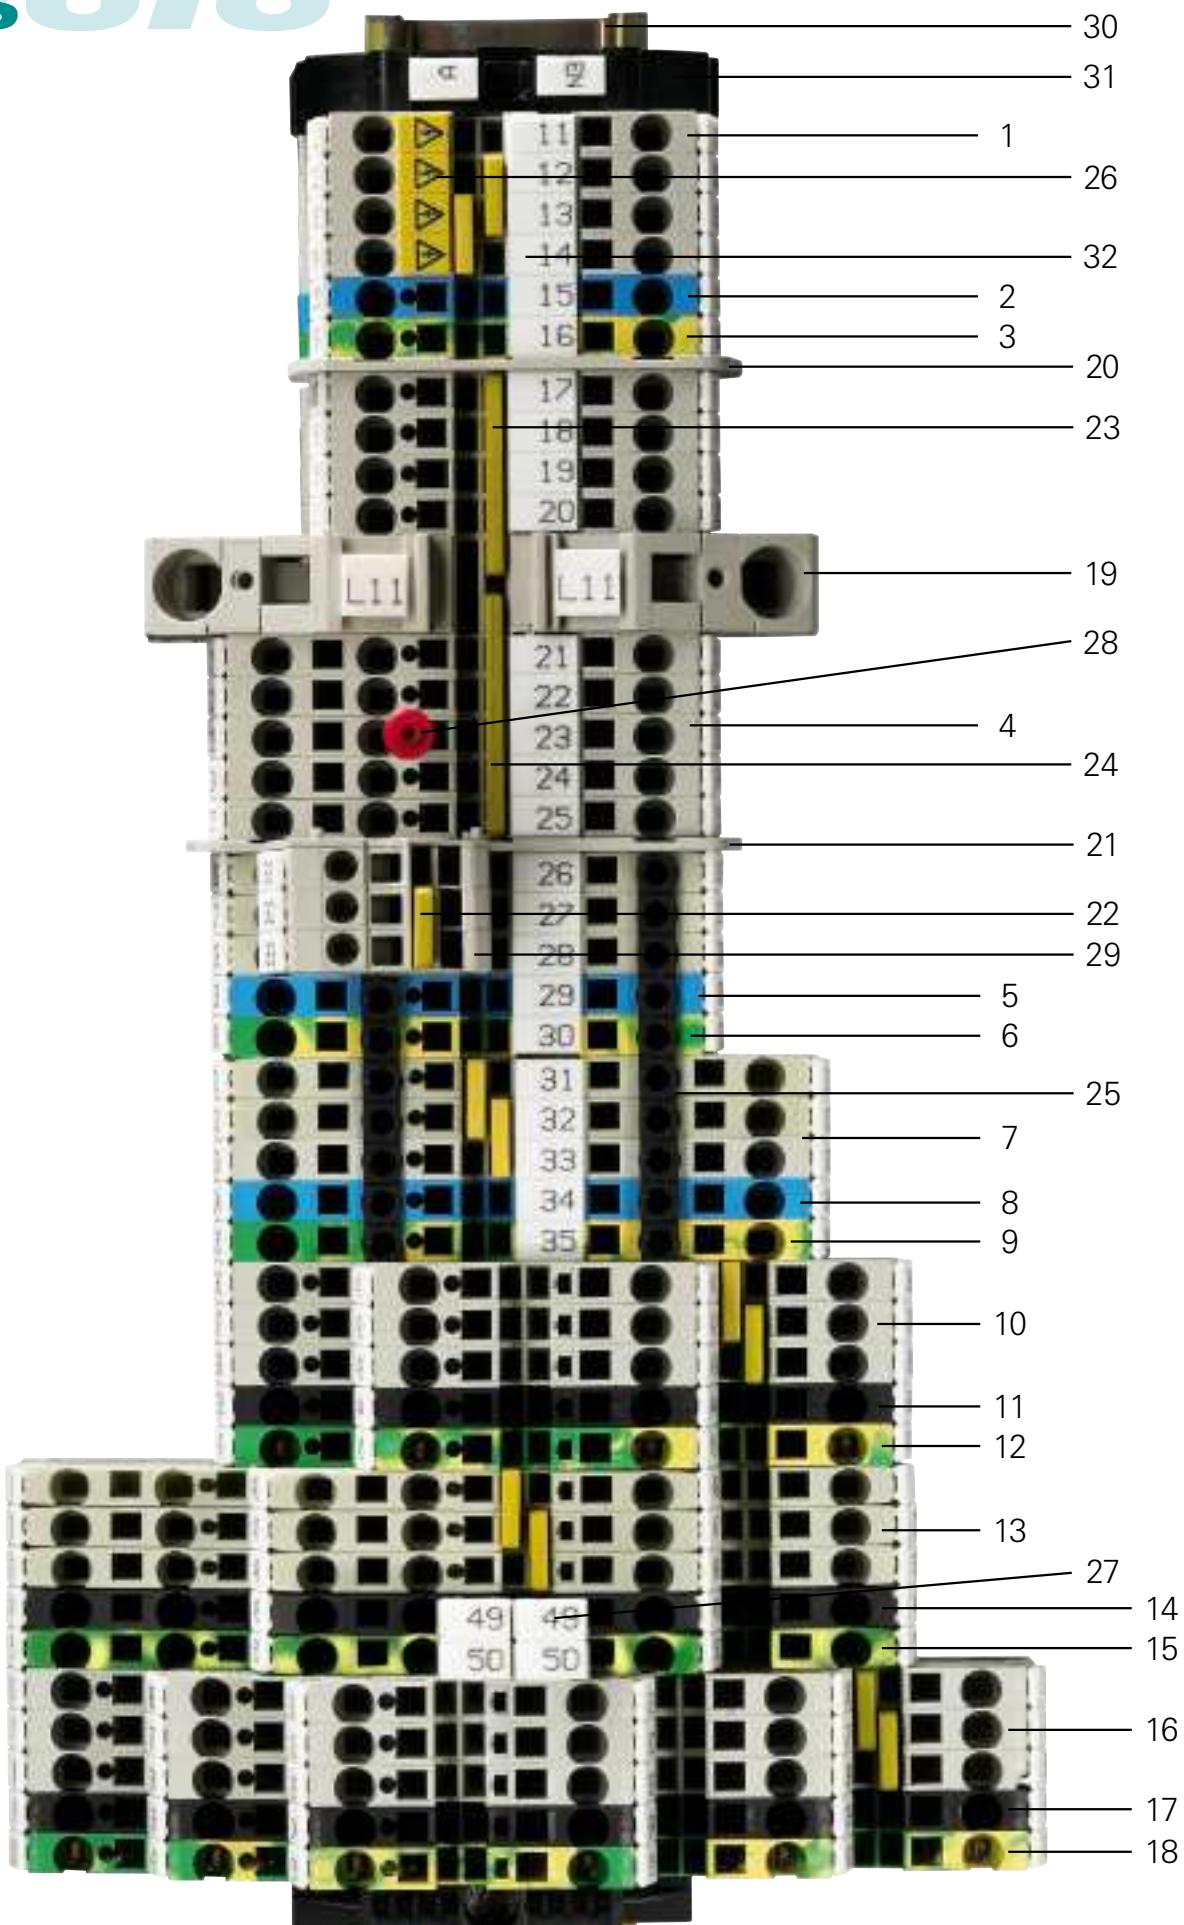

### **Easy and quick**

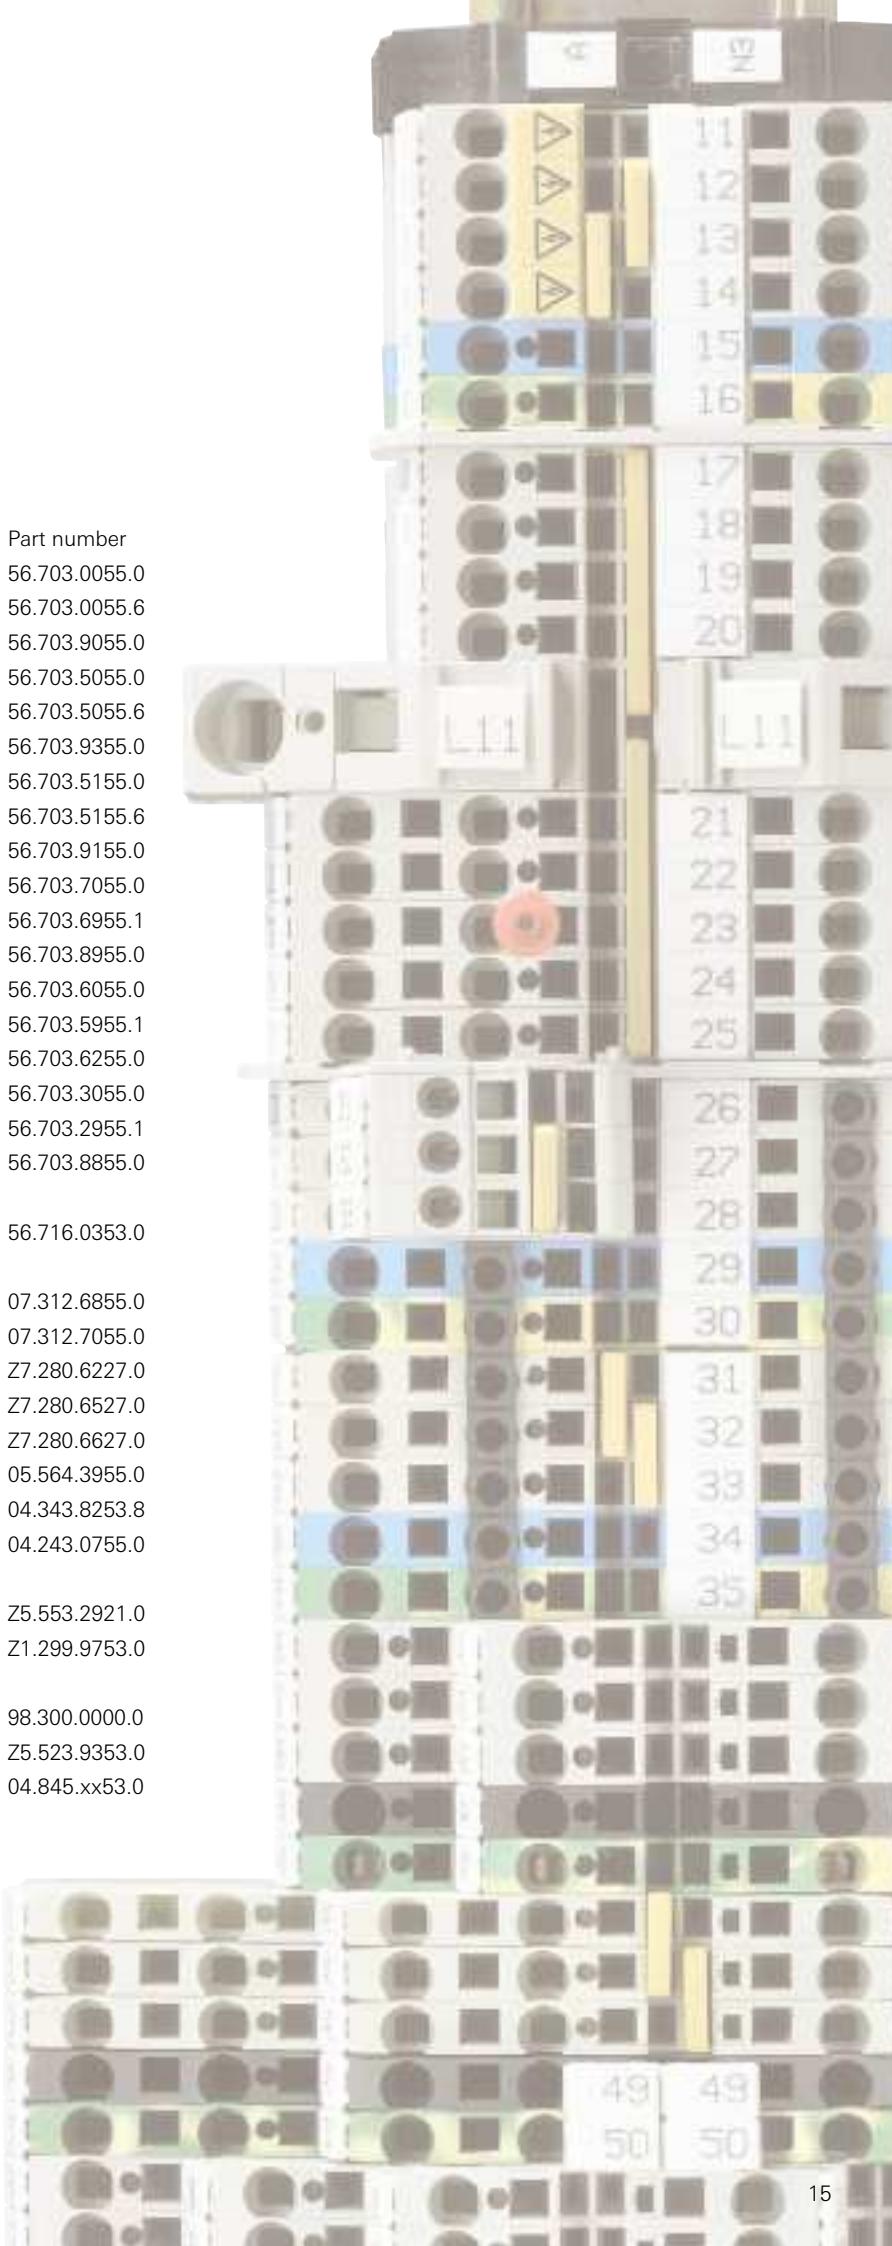

- Simple and intuitive user interface
- Direct graphical display of the marking tags including plausibility check
- Customized layouts can be created individually
- Data import from CAD, Excel, text or **wieplan** files

### **Durable and safe -**wieplot** engraving system**

- Easy modification to **wieplot** to make it an engraving system
- Engraving of multi-layer plastic boards
- Clean and dust-proof operation due to integrated vacuum device
- Create individual layouts using **wiemarc**

# Fuse blocks with tension spring connection

**fasis sis**

<sup>1)</sup> When selecting G fuse inserts, make sure that the specified maximum power is not exceeded.

The current is determined by the inserted fuse.

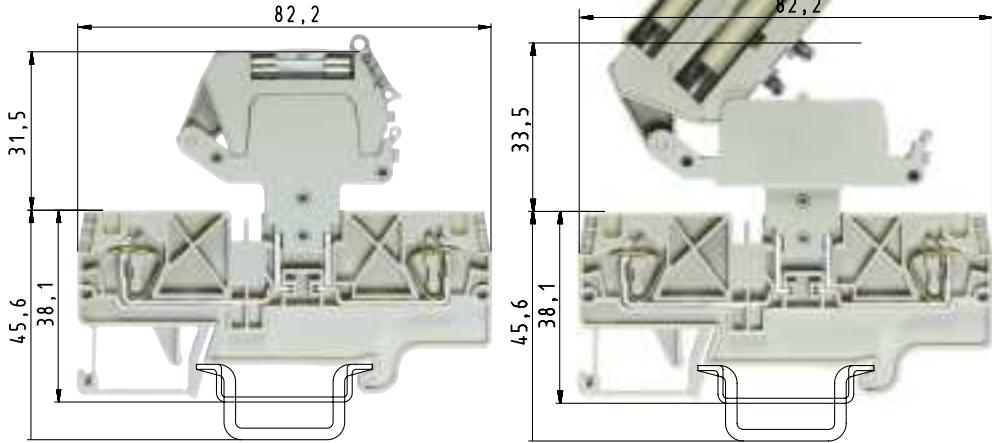

<sup>2)</sup> The voltage range is determined by the built-in LED display.

Depending on the application and the installation method, the circumstances for increased temperature must be checked in the closed fuse holders.

Higher ambient temperatures are an additional load for the fuse inserts. Therefore, the reduction of the rated current must be considered accordingly in these applications.

Indicator (24 V): LED, red  
current consumption: 10.3 mA

Indicator (220 V): LED, red  
current consumption: 0.3 mA

# Fuse blocks with tension spring connection

<sup>1)</sup> When selecting G fuse inserts, make sure that the specified maximum power is not exceeded. The current is determined by the inserted fuse.

<sup>2)</sup> The voltage range is determined by the built-in LED display. Depending on the application and the installation method, the conditions for temperature rise must be checked in the closed fuse holders.

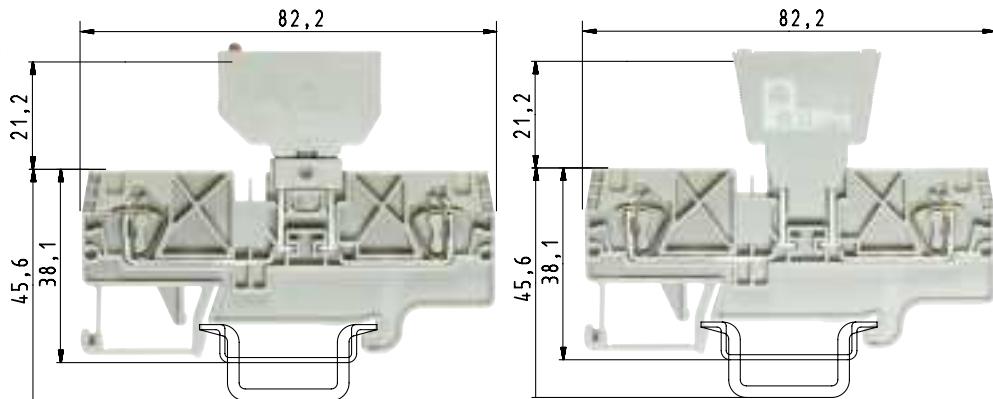

Higher ambient temperatures are an additional load for the fuse inserts. Therefore, the reduction of the rated current must be considered accordingly in these applications.

Indicator (24 V): LED, red  
current consumption: 10.3 mA

Indicator (220 V): LED, red  
current consumption: 0.3 mA

<sup>3)</sup> Periodic peak voltage 1000 V  
Direction Anode Cathode<sup>5)</sup>  
of the diode: Cathode Anode<sup>6)</sup>

<sup>4)</sup> The current load is determined by the component installed.

# Initiator and actuator blocks with tension spring connection

## fasis SIS

### System advantages used

For machine and system control wiring, practice-oriented solutions are preferred that are primarily economical and reliable and thus contribute to the system's operational and functional safety.

**fasis** KOI was designed to connect the great variety of initiators and actuators to central and remote control systems. The initiator and actuator blocks of type WKF 1,5 KOI have, in particular, been conceived for the requirements in machine and system engineering. They facilitate the wiring task through clearly arranged termination points and an easily accessible and operable tension spring technology.

**fasis** KOI is a compact and efficient wiring system for connection purposes, potential distribution and transmission of signals from initiators and actuators.

- Control-compatible system solutions through accurate tuning of the connection modules' number of poles to the input and output modules of the PLC.
- Flexible fixation through snap-on to the TS35 mounting rail or screw-on of the connection module to the base board.
- Application-specific individual terminal block as a link between initiators, actuators and the PLC.

### Economically designed

• Low space requirements due to compact dimensioning of the individual terminal blocks and integration of the potential distribution inside the connection module.

• Efficient installation and start-up of the wiring system by simply fitting the connection module with components, which supersedes additional connection accessories.

• Reduction of the warehousing costs due to a low variety of parts without having to forego flexibility in the application.

### Service-friendly operation

• Short maintenance times for modifications of the terminal block assembly by replacing or extending individual blocks without interrupting the power supply of the other initiator and actuator blocks.

• Immediate visual monitoring of the switching states due to integrated light-emitting diodes.

• No maintenance required due to a permanently safe and dynamic terminal block connection using spring clamp technology in a tension spring system.

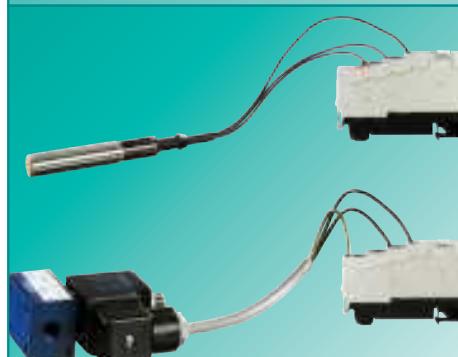

### Application-related selection

• Power supply to the connection modules through supply blocks, alternatively with LEDs.

• Potential distribution through connection modules in designs for 9 (1+8) or 18 (2x(1+8)) terminal blocks.

• Initiator blocks, for example for the connection of 3-wire or 4-wire proximity or position switches, alternatively with LEDs.

• Actuator terminals, for example for the connection of magnetic valves.

# fasis

**Connection module**

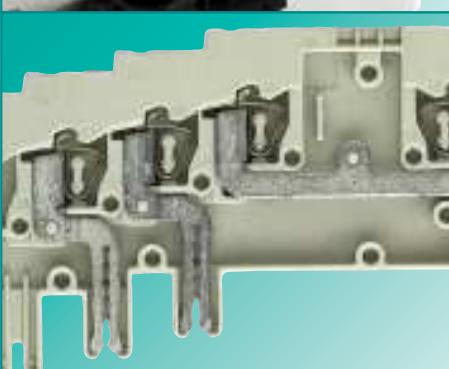

**Cover for connection modules**

**Wire entry guides**

**Marking system**

**Materials**

## **Collect and distribute potentials**

- Potential distribution is achieved quickly and safely as soon as the terminal blocks are snapped on.
- Connection rails for the plus, minus and ground or screen potential are each integrated in the connection modules.
- The system does not require any additional cross connectors.

## **Collect and distribute potentials**

- Unused terminal block locations can be closed with connection module covers and thus prevent accidental contact.
- The covers are delivered in 8 pole sets and can be separated individually as required.
- Protection against accidental contact according to IP20 is guaranteed when the covers are snapped on.

## **Connect „small cross sections“ safely**

- Wire entry guides prevent the wires from being inserted too deeply (smaller than  $1 \text{ mm}^2$ ) and enable an easy, professional and quick installation.
- Ensure the connection of solid and fine-stranded wires smaller than  $1 \text{ mm}^2$ .
- Also see the accessories for DIN rail terminal blocks on page 73!

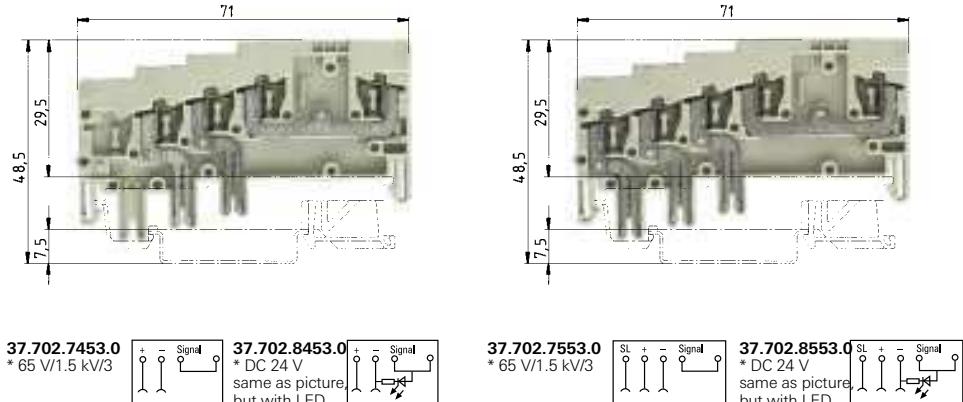

## **All clamping points marked clearly**

- Marking tags easily readable even with the wires connected.
- Clear assignment of wire to the termination point while wiring.
- Simplified troubleshooting for servicing.
- Individual marking with the **wiemarc** and **wieplot** marking systems.

## **High-quality materials selected**

- Special alloys enable low feed-through resistance and provide a gas-tight contact area:
  - clamping spring: stainless CrNi steel
  - current-carrying bar: tin-plated copper
- Polyamide has excellent electrical, chemical and mechanical characteristics:
  - temperature resistance: up to  $120^\circ\text{C}$
  - creepage resistance: CTI 600
  - flammability class: self-extinguishing, UL94-V2

# DIN rail terminal blocks with tension spring and pluggable connections

## fasis SIS

### System advantages

- Spring clamp technology**  
with tension spring connection

Separation of electrical and mechanical functions

### TOP connection

Wire entry and screwdriver access in same plane

### Built-in test points

### Pre-assembled modules

### Pluggable wiring inside the control cabinet

- Protected against accidental contact

- Safety through coding

### Application advantages

- **Dynamic connections**  
Protection of the connection against "cold flow" and creepage
- **Pre-programmed clamping force**  
The clamping force required to connect the wire, is created by the spring elements of the clamp
- **Durable and maintenance-free electrical connection**  
according to EN 60947-7-1

### Clear wiring

In small confined spaces

- **Test points for test plugs** up to Ø 2.3 mm on all clamping points, without having to remove the connected wire
- **Reduced downtime** due to quick and easy component replacement
- **Wiring errors reduced to a minimum**
- **Cost reduction** in assembly on site

- **Time saving due to pluggable accessories**

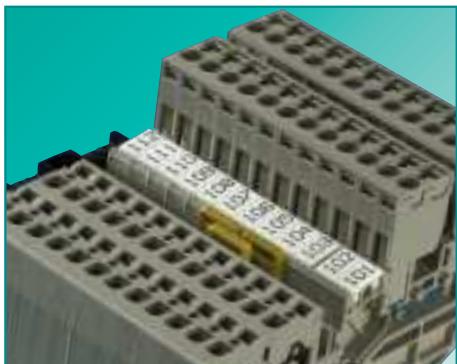

- **Flexible potential distribution**  
through terminal strip

- Two versions of DIN rail terminal blocks:

- WKF 2.5/D2/8113... with 2 inputs and 2 outputs on one potential, only 5 mm wide
- WKF 2.5 E/8113/35 with 2 input and 2 outputs with different potentials in double-tier design

- Dead front safety as per IEC 60529 due to shrouded pins on the plug side

- Coding pieces prevent incorrect mating of the pluggable connector

## Cross connection

- Jumpering with insulated cross connector IVB WKF 2.5...
- Two-channel system inside the terminal strip enables chained jumpering through cross connectors
- No partition plates required between adjacent cross connectors
- Cross connectors IVB WKF 2.5... can be loaded with the rated current

## Wire entry guides

- For the connection of wires with cross sections smaller than 18 AWG we recommend the use of wire entry guides
- Wire entry guides prevent the wires from being inserted beyond the optimal clamping point and ensure a safe and secure connection

## Marking accessories

- Single marking tag in 5 mm spacing
- Marking strips (10 tags) to snap on to the terminal blocks
- Tear-off marking strips for 3-digit marking options per block
- Custom marking upon request

## Cover with warning symbol

- Cover with warning symbol ADF to snap on to blocks that remain live when the main switch is disconnected (VDE 0113)
- Cover for spring-loaded termination point ADF 2.5/4 GELB
- Cover for PCB connection ADF 8113/10 GELB
- Cover can only be removed with a screwdriver

## DQS certificates for all products

- Quality standard as per DIN ISO 9001
- in Development, Production, Assembly
- Continued control of the quality standard by means of regular internal and external quality audits
- Compatible with certificates of other countries:
  - BSI Certificate, Great Britain
  - SQS Certificate, Switzerland
  - Aib-Vincotte Certificate, Belgium
  - ÖQS Certificate, Austria

## Material

### Metal parts

Special alloys and surface treatments provide low contact resistance and high corrosion resistance

Clamping spring: stainless CrNi steel  
Busbar: tin-plated cooper

### Insulating material

Polyamide has excellent electrical, chemical and mechanical characteristics

Insulating housing: Polyamide 66/6

Tracking resistance: CTI 600

Flammability class: UL 94 V-0

(see also AT catalog section **facts & DATA**)

Our **wieplan** software helps to plan your DIN rail terminal block assemblies (see AT catalog page 36/37).

## Note

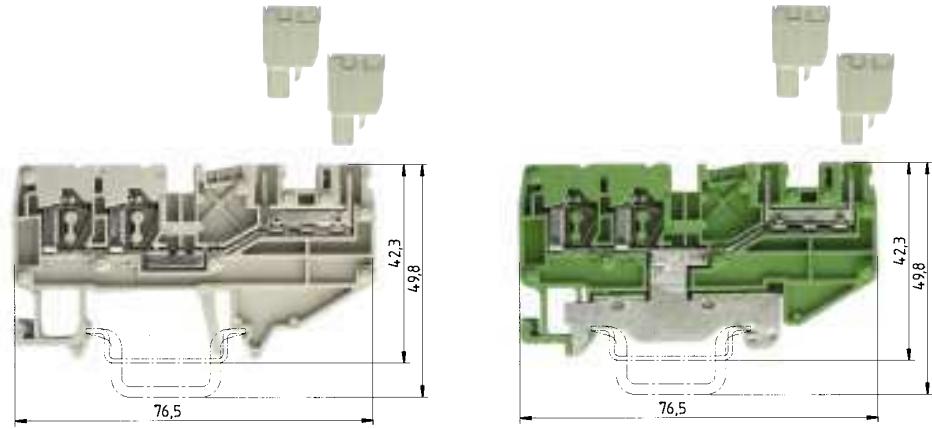

The information regarding cross-sectional areas and connection types pertains to wires without ferrules. Ferrules are not necessary for secure connection.

The voltage ratings apply to the terminals in their intended application. When different products are mounted adjacent to each other, the proper isolation distances must be adhered to. For this purpose, **Wieland** offers a large selection of appropriate accessories.

A detailed description of technical data, the standards requirements, and the application conditions can be found in catalog section **facts & DATA**.

# Motor connection block with tension spring connection

## fasis SIS

**mark**

We have designed the motor connection block for a practice-oriented wiring of three-phase field devices. This is especially exhibited in the dimensioning of the rated values such as the high rated voltage of 800 V (EN 60947-7).

The connector can therefore also be used in 690 V networks, for example as connector for activating generators or AC motors up to 15 kW.

For the 4 wiring tiers of the motor connection block (3 feed-through potentials and one ground connection) the space requirements on the mounting rail are reduced to only 6 mm.

The motor connection block is a "space saver" providing you with many connection options.

### **Clear marking of all clamping points**

#### **Benefits:**

- Group marking in the center of the block is possible
- Clear assignment of wire to termination point on wiring
- Individual marking with the **wiemarc** marking system

### **Flexible and universal connecting**

#### **Benefits:**

- Connection of solid, stranded and fine-stranded wires between 0.13 and 6 mm<sup>2</sup>
- Connection of fine-stranded wires with ferrule between 0.5 and 4 mm<sup>2</sup>

### **Use and save**

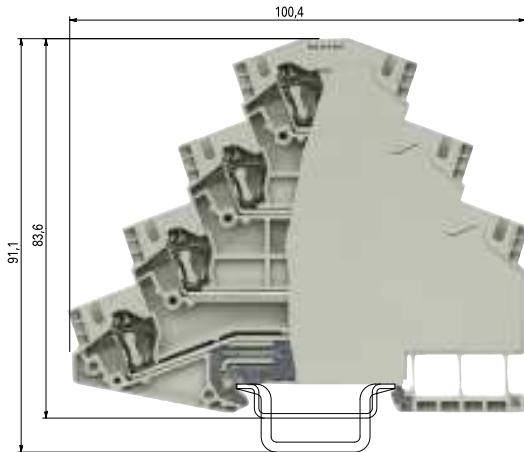

#### **Benefits:**

- Snap on and the ground connection to the mounting rail is made
- Compact: 6 mm required on the mounting rail for one motor
- Design: closed insulated housing, no accessories

### **Measuring voltage with an integrated testing facility**

#### **Benefits:**

- Testing at full wiring
- Testing directly at the current carrying bar

# DIN rail terminal blocks with tension spring connection

## fasis MINI

### Solutions for applications in confined spaces

With our DIN rail terminal block system **fasis MINI** we focus on the application's size and flexibility. **fasis MINI** is a range of DIN rail terminal blocks in tension spring technology designed for installation in confined spaces.

The portfolio comprises ground blocks and feed-through blocks in various colors with 2 or 4 connections per potential.

The potential in the WKFM 2,5 terminal block series can be distributed, modified and extended quickly, flexibly and without problem by using cross connectors.

For installation on TS 35 and TS 15 mounting rails, on mounting boards or inside universal terminal boxes we provide various designs with latching foot, latching pin or screw flange.

- Space-saving miniature terminal blocks in many designs for installation inside universal terminal boxes, motors and applications with low space requirements.
- Easy wiring through user-friendly entry guides for screwdrivers from the top.
- Marking tags easily readable even with the wires connected.
- Individual planning and marking using **wieplan** and **wiemarc**.

### Application-related selection

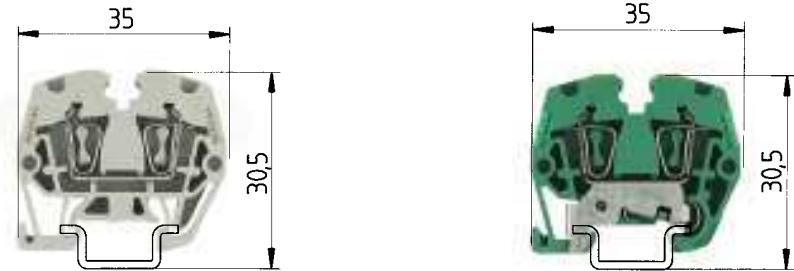

- Miniature terminal blocks with latching foot for direct installation on the mounting board.
- Miniature terminal blocks with flange for direct screw fixation on the mounting board.
- Miniature terminal blocks for installation on TS 15 or TS 35 mounting rails.

### Combined individually

- DIN rail terminal blocks of the **fasis MINI** series are available in 2 and 4 pole configurations.
- **fasis MINI** blocks can be chained individually even without mounting rails by using the integrated latching pins.
- The various potentials and terminal blocks are visually distinguished by various color variations.
- Individual marking using marking tags or customized printing of the terminal blocks.

### Permanent electrical connection

- The tension spring system provides a dynamic clamping connection. Load-controlled and thermal cold flow properties of the connected wires are balanced.
- Maintenance-free and gas-tight electrical connection as specified by the approvals. Customized layouts can be created individually.
- Separation of electrical and mechanical functions.

# Configuration and marking systems for DIN rail terminal blocks

**fasis**SIS

## Configuration software **wieplan**

Type	Part No.	Std. Pack
wieplan CD	95.502.1000.0	1
<b>Contents:</b>		
CD with cover	Marking computer in case	CD with cover
	European power supply unit	
	Power Pack	
	Data cassette with job memory	
	Marking tag carrier	
	Plotter pen, 0.25 mm	
	Cleaning set	
<b>Description:</b>		
<b>wieplan</b> is a software used to configure, document and order DIN rail terminal block assemblies. The intuitive user interface makes working with <b>wieplan</b> as easy as child's play.	<b>wieland marcom 2</b> is a freely programmable marking computer for DIN rail terminal blocks, pluggable connectors, switching devices and cables. The computer provides of a large number of fonts, with numerical and alphanumerical characters and symbols. <b>marcom 2</b> is portable and can be used at any location; it can be operated either using the mains or batteries.	<b>wiemarc</b> is a Windows® based plotter software for customized marking using the <b>wieplot</b> 500. plotter system. Both the Wieland standard marking system and marking tags and labels of other suppliers can be marked easily. The <b>wiemarc</b> software version 4.0 provides the option of connecting to the <b>wieplot</b> 500 E-UNIT engraving system.
<b>wieplan</b> enables data exchange through CAE systems: – EPLAN 5 – EPLAN Electric P8		

### System requirements:

Pentium II PC or compatible, min. 200 MHz  
64 Mbyte RAM  
CD-ROM drive  
VGA graphics adapter and monitor  
**wieplan** supports: Windows 98®  
Windows 2000®  
Windows NT®  
Windows ME®  
Windows XP®

### Technical data:

Operator panel: 190 mm x 45 mm  
Resolution: 0.01 mm  
Power supply unit: 50/60 Hz, 100–230 V  
Output voltage: 9,5 V (150 mA/1.4 VA)  
14 V (450 mA/6.3 VA)  
Replaceable battery: 16.8 V (14 NiCd-Zellen)  
Dimensions: 380 mm x 190 mm x 63 mm  
Weight: 6.2 kg

### System requirements:

Windows XP®

# Marking system for DIN rail terminal blocks with spring clamp connection

*fasis*

**Plotter system *wieplot* 500**

Type	Part No.	Std. Pack
Complete package	95.502.0604.0	1

**Contents:**

Plotter **wieplot** 500  
Data cable and manual  
4 receptacles for WSB\*  
Accessories kit  
Software **wiemarc**

**Ink kit for *wieplot* 500**

Type	Part No.	Std. Pack
Ink kit	95.502.0610.0	1

**Contents:**

Plotter pen 0.25 mm with ink cartridge  
Permanent plotter pen 0.3 mm  
Cleaning set  
**Plotter pens for wieplot 500 systems:**

Plotter pen 0.18 mm	95.502.0118.0
Plotter pen 0.25 mm	95.502.0125.0
Plotter pen 0.35 mm	95.502.0135.0

Plotter pen 0.50 mm	95.502.0150.0
Plotter pen 0.70 mm	95.502.0170.0
Plotter pen 1.00 mm	95.502.0100.0

**Description:**

With **wiemarc** you can create customized marking data on your PC. These can then be output on the **wieplot** 500 plotter system to various marking plates.

\* WSB (= Wieland standard marking system)

**Engraving unit for *wieplot* 500**

Type	Part No.	Std. Pack
wieplot 500 E-UNIT	95.502.0700.0	1

**Contents:**

Engraving spindle  
Engraving head (with fuse and counter bearing)  
Control unit **wieplot** VEC 500  
Vacuum cleaner **wieplot** VC 500  
Connection cables

**Technical data:**

Resolution:	0.01 mm
Accuracy:	+/- 0.05 mm
Power supply unit:	50/60 Hz, 100–240 V,
Output voltage:	24 V DC 1.4 A
Current input:	ca. 0.3 A bei 220 V
Approval:	UL-UL1950 CSA 950 VDE EN 60950

**Accessories:**

Ink cartridge P1.0, 5 x 1 ml	95.502.0199.0

# DIN rail terminal blocks for junction boxes with spring clamp connection, type WKF/WKIF/WKIS

**„We at Wieland“ know what you need!**

For more than 90 years we have been your competent partner in the field of connection technology for your products. Close cooperation with our customers helps to create innovative products manufactured according to the highest quality standards.

Increasing automation as well as the safety functions to be implemented inside buildings increase the requirements for power and signal management in electrical distribution systems. The growing number of circuits and the increasingly confined space available requires a DIN rail terminal block system that reduces the amount and costs of cabling but still enables clear and convenient wiring.

Wieland's DIN rail terminal blocks provide you with the right solution.

## ***selos/fasis* BIT**

## ***fasis* BIT-S Type WKIS...**

## ***fasis* BIT Type WKF/WKIF...**

## ***selos* BIT Type WK/WKI...**

## **The right solution for your application**

All DIN rail terminal blocks of the BIT series comply with the directives for the setup of high-voltage and supply systems for safety services according to VDE 0108 and have been designed for use in public buildings. Isolation measurement, for example, can be carried out with the wires connected.

You have the choice. The connection technology can be implemented either in purely spring clamp or screw technology or they can be mixed together.

## **DIN rail terminal blocks with push-in spring**

The new installation blocks of series ***fasis* BIT-S** with push-in are an outstanding extension to the existing product range.

***fasis* BIT-S** helps to increase efficiency in electrical installations even more, since rigid as well as flexible wires with ferrules can be directly connected without opening the termination point thus achieving considerable time savings.

## **DIN rail terminal blocks with tension spring**

The tension spring technology of series ***fasis* BIT** stands out due to its maintenance-free and vibration-proof connection technology. The TOP connection is especially suitable for confined spaces.

Due to its great product variety and a wire range between 0.5 mm<sup>2</sup> and 16 mm<sup>2</sup> the ***fasis* BIT** series enables many innovative solutions for various requirements.

## **DIN rail terminal blocks with screw connection**

The screw connection technology of series ***selos* BIT** is the best known and most widely used connection technology worldwide. The lateral connection option makes wiring more convenient in installations, especially on the supply side and in the case of larger cross sections.

The user-friendly ***selos* BIT** series can be used universally in the wire range between 0.5 mm<sup>2</sup> and 50 mm<sup>2</sup>.
